

# Junior IAM Consultant

Identity & Access Management · Athens, Attica

## About Us

AspisID is a One Identity professional services player, providing solutions in consultancy, project management and development. Our unique business value-oriented approach where strategy, processes and technology are developed side by side allows us to accelerate delivery and help clients in their digital transformation in a tangible way.

## The Role

We have an excellent opportunity for strong software developers to expand their skills within the rapidly growing field of Information Security and become Identity and Access Management (IAM) Consultants. Although existing skills in this field would be beneficial, no previous experience is required. All successful applicants will receive training to help them progress to an advanced level of working mostly from Athens and sometimes across Europe.

We offer you the opportunity to work in a demanding and rapidly growing area of IT solution delivery, exposing you to a wider range of real-world customer challenges and systems and solutions across a diverse range of industries. You will work in a highly collaborative team environment and be provided with the support and personal development to become a fully integrated and productive consultant.

## Ideal Candidates Should Have

- A minimum of 1-3 years' experience in the development of C#/VB .NET and/or Java/J2EE solutions
- A minimum of 1 year's experience in the development of SQL (any flavour)
- Directory experience (AD, Azure, LDAP)
- SaaS deployment experience
- Proven track record in working as part of a team, meeting deadlines, mentoring
- Excellent problem-solving and strong communication skills – both in written and verbal English
- Self-motivation and ability to take a pro-active approach to work assignments
- Willingness to travel – this role can require some client-site work
- A desire and interest to work for the Information Security Sector

## Nice To Have, But Not Necessary

- Experience with JavaScript and one of the major JavaScript MVC frameworks (preferably Angular)

- Familiarity with development against documented APIs
- Familiarity with Container based application deployment in Docker and associated tools, e.g. Kubernetes
- Knowledge of Cloud architectures and complex enterprise On-Premise IT landscapes and hybrid Cloud/On-Prem architectures
- Knowledge of enterprise web technologies, security and cutting-edge infrastructures
- Knowledge of enterprise identity lifecycle management processes and standards

### **What We Offer**

- Continuous training and development
- Full-time contract and salary
- Private insurance
- Company laptop
- Flexible working schedule and the freedom to choose where you work from
- A fun and casual working environment with flat organisation
- Social events
- Free, unlimited coffee
- Amazing colleagues
